

IN THE CLAIMS:

Please amend claim 27, and add new claims 34-36 as follows:

1-26. (Cancelled).

27. (Currently Amended) A liquid crystal display device comprising:
a first substrate having thereon a pixel electrode and an active element;
a second substrate having thereon an opposed electrode; and
a liquid crystal layer interposed between said first and second substrates with
said electrodes facing each other,

wherein a first orientation control element extending in a nonparallel direction
relative to an extending direction of an edge of said pixel electrode and a second orientation
control element extending in a parallel direction relative to an extending direction of said
edge are provided on at least one of said first and second substrates, and

wherein said second orientation control element is constituted by an assembly
of distinct plural orientation control elements having a same directivity in the same direction
in a direction of the substrate's plane surface, and

wherein said assembly is entirely formed between adjacent repetitions of said
first orientation control element.

28. (Original) The device according to claim 27, wherein said second
orientation control element is formed to extend in an outer direction from said first

orientation control element which is adjacent to said second orientation control element on the same substrate.

29. (Original) The device according to claim 27, wherein at least one of said first and second orientation control elements is a slit formed in said pixel electrode or said opposed electrode.

30. (Original) The device according to claim 27, wherein at least one of said first and second orientation control elements is a protrusion formed on said pixel electrode or said opposed electrode.

31. (Original) The device according to claim 27, wherein a dielectric anisotropy of said liquid crystal molecules of said liquid crystal layer is negative.

32-33. (Cancelled)

34. (New) The device according to claim 27, wherein each individual one of said assembly has a same shape.

35. (New) The device according to claim 27, wherein all individual orientation control elements of said assembly are arranged in a single line.

36. (New) The device according to claim 27, wherein said assembly comprises a series of triangular shapes, when looking perpendicular to said substrates, all of said triangular shapes pointing in a same direction.
